

BSAI 6A

Quiz 1

Q1.

- a. Describe the structure and working of FP-Tree in frequent pattern mining.
- b. Differentiate between binary, multi-class, and multi-label classification.
- c. Given the dataset {10, 20, 30, 40, 50}, calculate the mean, median, and apply Min-Max normalization to the value 30.

Quiz 2

Q1. Describe the major steps involved in the Data Mining process.

Q2. Differentiate between Data Mining and simple query processing or expert systems.

Q3. Explain why data mining has become important in the era of digital data explosion.

Quiz 3

Q1. Explain how data mining is applied in business, healthcare, and finance sectors.

Q2. Describe the advantages of data mining in operational efficiency and risk management.

Q3. Discuss the challenges in data mining, including data quality, privacy, overfitting, and underfitting.

Quiz 2

Q1. Explain the role of data preprocessing in the data mining process.

Q2 Define Data Mining and explain the Knowledge Discovery in Databases (KDD) process.

Q3. Discuss the importance of data presentation and visualization in data mining.

BSAI 6A

Quiz 1

- Q1.** a. Explain the concept of Support Vector Machines (SVM), including hyperplane, margin, and support vectors.
- b. Explain the importance of model evaluation techniques in supervised classification.
- c. Given the dataset {10, 20, 30, 40, 50}, calculate the mean, median, and apply Min-Max normalization to the value 30.

Quiz 2

- Q1.** Define Data Mining and explain why it is also called Knowledge Discovery in Databases (KDD).
- Q2.** Differentiate between Data Mining and simple query processing or expert systems.
- Q3.** A bank wants to predict loan approval status based on customer attributes. Identify the type of classification problem and suggest suitable algorithms with justification.

Quiz 3

- Q1.** Discuss the key applications of Data Mining in fraud detection and anomaly detection.
- Q2.** Describe the advantages of data mining in operational efficiency and risk management.
- Q3.** Discuss the challenges in data mining, including data quality, privacy, overfitting, and underfitting.

Quiz 2

- Q1.** Explain the role of data preprocessing in the data mining process.
- Q2.** Describe common data mining techniques such as Decision Trees, Naïve Bayes, KNN, SVM, and Apriori Algorithm.
- Q3.** Discuss the importance of data presentation and visualization in data mining.
